CFS- 3 Solids Filtration

Standard Features:

- Stainless steel construction
- Two stainless steel pre filters reduce bag filter changes
- 20 micron nominal filtration
- Cascade electrical eliminates input water overflows
- Casters provide mobility and increased flexibility

Benefits:

- Total elimination of filter cartridges reduces maintenance and cost of maintenance
- Filters solids to as low as 20 micron nominal
- High chemical resistant
- It's automatic, you just keep it clean!

Specifications

- Dimension: 39" L X 18" W X 17" H
- Electrical: 115 Volt 15 Amp
- Filtration Capacity: flow rates up to 5 GPM

How it Works:

As dirty water is transferred to the CFS3 wastewater passes through two stainless steel classifier screens. The pre-filtered water then passes to the bag filter where it is filtered to 20 microns. As the water passes through the bag filter and into the sump area, a float will activate a transfer pump to pump the filtered water away. We suggest changing the bag filter at the end of each shift to ensure that the system does not need changing in the middle of operation. NO CARTRIDGE FILTERS to clean or change out!
