

ARS - Conveyor Automatic Reclaiming System

Features:

- Removes the gun from the operators hands
- We build the ARS to fit your screen size. Start at 20" and increase in 20" increments up to 80". The length can be whatever the input conveyor length requires.
- Stainless steel construction
- Loading area for screen handling and chemical applications
- All wetted components are chemical resistant for long life and low maintenance
- Ergonomic screen loading area
- Remote blaster power system provides added flexibility in system placement
- Optional filtration systems available for recycling or pre-treatment to sanitary sewer

The benefits include:

- Fast - cleans both sides of the entire screen surface in each pass
- Easier on your operators- the ARS does the cleaning, your personnel can be doing other things
- Reduces employee exposure to chemical and water splashing
- Doesn't create hazardous waste - the ARS does not have any internal tanks that store and build up hazardous sludge
- Your choice of chemicals- Use the chemicals you're using now, or change any time you wish, it's your choice

How it works:

Apply emulsion stripper to both sides of the screen, let it dwell. Place the screen in the ARS, hit the start button and go back to work. The ARS continues to pass over the screen until the operator determines that it's done. If the screen requires dehazing, repeat the process after applying dehazer.

Specification

Determined by screen size.
