Gravity Flow Carbon System for Removal of Pollutants From Waste Streams.....

This Gravity Flow Carbon System is designed as a slow flow carbon contact vessel to remove organic matters and others from wastewater. Ideal for use as a final treatment method in waste water processing. The system can also be used as a treatment for overflow water from a recycle systems storage tank and treat the water before it is sent to discharge.

TYPICAL COMPOUNDS THAT WILL BE REMOVED OR REDUCED

- LIGHT HYDROCARBONS
- BENZENE
- CHLORINE
- PESTICIDES
- HERBICIDES
- GASOLINE
- PHENOL
- TOLUENE
- XYLENE

SPECIFICATIONS

DIMENSIONS:	30" W X30' L X 36" H
WEIGHT	750 Lbs.
TANK MATERIAL	UV Protected Polyethylene
MAX FLOW RATE	10 GPM
FILTER MEDIA	12.5 Cubic Ft.
INLET/OUTLET SIZE	1 1/2" FPT
